

ShopEZ – Project Planning Document

Project Type: MERN Stack E-Commerce Platform

Developer: Individual Project

Duration: 4 Agile Sprints

Project Vision

ShopEZ aims to provide a seamless online shopping experience through a responsive web application that allows customers to browse products, manage carts, place orders, and track purchases while enabling administrators to manage products and orders.

Project Objectives

- Secure user authentication
- Efficient product management
- Smooth checkout workflow
- Responsive UI
- Analytics and reporting
- Scalable MERN architecture

Detailed Sprint Plan

Sprint 1: Authentication & User Management

Sprint 2: Product Catalog, Search and Filters

Sprint 3: Shopping Cart, Checkout and Orders

Sprint 4: Admin Dashboard, Testing and Deployment

Risk Assessment

Potential risks include database connectivity issues, API failures, performance bottlenecks, and deployment challenges. Mitigation includes testing, backups, and monitoring.

Success Criteria

Users can register, login, browse products, add items to cart, place orders, and administrators can manage products successfully.
