

ShopEZ E-Commerce Shopping Platform

- Data Flow Diagram & User Stories

Data Flow Diagrams

Level 0 DFD (Context Diagram): The system accepts customer inputs such as registration, login, product searches, cart operations, orders, and admin actions. The system generates outputs such as order confirmations, order tracking updates, inventory updates, and analytics reports.

Level 1 DFD Flow

User registers/logs in → Authentication Service validates credentials → JWT token issued.

User browses/searches products → Product Controller retrieves product data → Results displayed.

User adds items to cart and places order → Order Controller processes order → Payment verification completed.

Admin manages products, inventory, and orders through Admin Dashboard.

All data is stored and retrieved from MongoDB Atlas.

User Stories

User Type	Epic	Story No	User Story / Task	Acceptance Criteria	Priority
Customer	Registration	USN-1	Register account	Account created successfully	High
Customer	Login	USN-2	Login	Valid	High

			securely	credentials authenticate user	
Customer	Browse Products	USN-3	View products	Products displayed with details	High
Customer	Search Products	USN-4	Search products	Relevant products returned	High
Customer	Shopping Cart	USN-5	Manage cart items	Cart updates correctly	High
Customer	Checkout	USN-6	Place order	Order and payment processed	High
Customer	Order Tracking	USN-7	Track order status	Status updated in real-time	Medium
Customer	Wishlist	USN-8	Save favorite products	Wishlist stores products	Medium
