

ShopEZ – Define the Problem Statement

Date: 18 June 2026

Project Name: ShopEZ – E-Commerce Shopping Platform

Developer: Individual Project

Maximum Marks: 2 Marks

CUSTOMER PROBLEM STATEMENT TEMPLATE

Dimension	Description
I am	A digitally active customer aged 18–45 who frequently shops online using mobile and web applications.
I am trying to	Find quality products quickly, compare options, and complete purchases securely and efficiently.
but	Many shopping platforms have complicated interfaces, slow navigation, insufficient product information, and lengthy checkout processes.
because	Existing systems often prioritize product listings over user experience, making it difficult for customers to make informed purchasing decisions.
which makes me feel	Frustrated, uncertain, and less confident while shopping online.

PROBLEM STATEMENTS

PS-1

I am: Online Shopper

I am trying to: Find products quickly and compare alternatives.

But: Product information is scattered and search functionality is often inefficient.

Because: Many platforms lack advanced filtering, clear categorization, and intuitive navigation.

Which makes me feel: Frustrated and dissatisfied.

PS-2

I am: Customer

I am trying to: Complete purchases securely and efficiently.

But: Checkout processes are lengthy and payment security is unclear.

Because: Existing systems often have complex forms and insufficient trust indicators.

Which makes me feel: Concerned and hesitant.

PS-3

I am: Store Administrator

I am trying to: Manage products, orders, and customer activities efficiently.

But: Manual management processes are time-consuming and difficult to track.

Because: There is no centralized dashboard providing real-time information and analytics.

Which makes me feel: Overwhelmed and less productive.

CONCLUSION

The identified problem statements highlight the need for a secure, user-friendly, and responsive e-commerce platform. ShopEZ addresses these challenges by providing streamlined product discovery, secure transactions, efficient order management, and administrative analytics within a single integrated system.
